SUMMARY

Technical Program Manager (PMP) with 20 years delivering infrastructure and regulatory reporting systems in high-consequence environments, including eight years implementing Basel, CCAR, and FFIEC reporting for global banks. Reduced enterprise implementation cycles 92% (six months to two weeks) for G-SIB clients by converting bespoke engagements into a standardized data model and delivery playbook. Currently directing delivery for an \$8M+ construction portfolio.

EXPERIENCE

Project Manager — Ulster County Habitat for Humanity **Kingston, NY · 2024 – Present**

- Cut materials costs 20%+ house-over-house by establishing the organization's first formal procurement program: RACI purchasing controls, supplier and rebate accounts with stacked discounts to 25%, bid tracking, and price matching.
- Cut foundation costs 33% (\$60K to \$40K) by redesigning the foundation as a monolithic slab and running a competitive procurement process.
- Secured \$1.65M in competitive public funding (NYS HCR HOME, county, and CREST programs) and built the post-award compliance, reporting, and expenditure-tracking framework for concurrent grants.
- Serve as designated Cybersecurity Coordinator and lead internal technology initiatives; eliminated PM-software licensing costs by building a custom scheduling system in R after evaluating commercial platforms.
- In charge of Delivery for an \$8M+ infrastructure portfolio. Own the full lifecycle (permitting, procurement, municipal approval) for a 10-unit development, while managing \$1.65M in public grant compliance. Includes portfolio of four completed homes, a fifth permitted build, and a 10-unit, \$5.5M development.
- Preserved a \$40K grant against a fixed year-end deadline by building the case to acquire an alternate site after a NEPA review froze the original property, then delivering the replacement home in eight months.

Vice President, Basel Reporting — BNY (G-SIB) **New York, NY · 2022 – 2023**

- Increased reporting reliability 75% for critical G-SIB regulatory cycles by instrumenting root-cause analysis for overnight failures and enforcing upstream data validation.
- Recovered full working days for a 35+ person finance, technology, data, and governance team whose reporting cycles routinely ran past midnight after failed overnight runs.

Specialized Consulting Manager — Wolters Kluwer FSS **New York, NY · 2014 – 2022**

- Grew the CIT Bank engagement from \$1M to \$5M in signed consulting revenue by delivering ahead of expectations and expanding scope into risk modules and FR 2052a, leading a three-consultant delivery team and coordinating dozens of bank stakeholders.
- Reduced implementation cycles 92% (six months to two weeks) by architecting a “Bank in a Box” standardized data model, converting bespoke \$1M+ engagements into a repeatable product offering adopted by roughly a half-dozen clients.
- Led delivery across six global and regional banks (BBVA Compass, CIT, Mizuho, USAA, SMBC, China Merchants Bank), translating Federal Reserve rule changes into product requirements and implementation plans.
- Surfaced material discrepancies in a global bank's legacy CCAR reporting through systematic parallel reconciliation, driving corrected refilings of regulatory reports.
- Recovered a failed FR Y-14M/Q release without missing the filing deadline by cataloging hundreds of defects and driving remediation through product engineering.
- Reduced a client's regulatory-report runtimes from days to hours by directing SQL query and indexing remediation.

Middle Office Associate — IMC Trading BV

Amsterdam, NL · 2011 – 2014

- Enabled a double-digit reduction in custody and clearing costs by building a Python pipeline that gave the firm its first line-item visibility into custodian charges, arming the head of trading for renegotiation.
- Cut daily risk-critical position reconciliation from a 3-hour, 6am manual process to a 5-minute automated SQL job.
- Led migration of the closing Zug office's ETF and sovereign-bond operations to Amsterdam — 6 months embedded on-site, workflows re-engineered and automated — absorbing the function with one additional hire replacing three retired roles and zero trading disruption.

Analyst, Complex Accounting & Administration — BNY Mellon

New York, NY · 2005 – 2011

- Promoted from temporary analyst to leading a 5–10 person fund-accounting team; served ~3 years as BNY Mellon's sole on-site representative at APG, one of the world's largest pension funds, owning derivatives controls, reconciliations, and cross-border issue resolution.

OPEN-SOURCE SECURITY RESEARCH

N184 — Multi-Agent Code Analysis Platform (personal project)

2025 – Present

- Built a five-agent, multi-model analysis pipeline (Claude, GPT, DeepSeek, Gemini) with consensus validation that has produced 28 maintainer-confirmed findings across 14 open-source projects, resulting in 23 merged fixes.
- Maintained a 100% confirmation rate across all 28 published findings through hard quality gates: local-build reproduction, working proof of concept, adversarial review, and human approval before disclosure.
- Reduced full-repository scan time to ~30 minutes while holding operating costs to ~\$120/month by architecting a Kubernetes-native stack (k3s, KEDA autoscaling, rootless containers) on consumer hardware.
- Ran responsible disclosure across 14 maintainer communities — embargo management, severity assessment, CVE coordination, and remediation tracking.
- Delivered nine accepted fixes to Apple MLX and coordinated remediation with OpenBSD, ClickHouse, systemd, and Google Fuchsia maintainers, including two independently discovered dnsmasq CVEs (CVE-2026-4890/4891).

SKILLS

Program Leadership: Technical Program Management · Program Planning & Scheduling · Risk & Dependency Management · Cross-Functional Leadership · Roadmap & Release Management · Stakeholder & Vendor Management · Budgeting & Procurement · Program Governance
Technical: Kubernetes (k3s, KEDA) · Docker · CI/CD (Jenkins) · Python · SQL · R · PyTorch · LLM & Agentic Systems · Linux · Jira · MS Project · GitHub
Domain: AI Security · Banking Technology · Basel · CCAR · FFIEC · FR Y-9C · FR 2052a |
Languages: Dutch (professional) · German (conversational)

EDUCATION & CREDENTIALS

PMP — Project Management Institute (#3561191) · M.S., Finance — Northeastern University · B.S., Business (Finance) — University of Phoenix
